Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                   This sequence represents the mutated CH2 molecule Gldeltaab, and is a binding molecule of the invention. The recombinant binding molecule of binding a target molecule without tringering complement dependent lysis, or the cell-mediated destruction of the target molecule. Comprises: (a) a binding domain capable of binding a target molecule; and domain of a human immunoglobulin G (IgG) heavy chain. The binding molecule is used to bind a target molecule (especially FogammaRIIb molecule is used to bind a target molecule (especially FogammaRIIb phagocytosis). The binding molecule can be used to prevent or inhibit the binding of a second binding molecule, e.g. an antibody, to the target molecule. The binding molecule is useful for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                      graft-vs-host disease, organ transplant rejection, bone-marrow transplant autoimmunity (e.g. vasculitis, autoimmune haemolytic anaemia, autoimmune thrombocytopeania and arthritis), alloimmunity anaemia, autoimmune thrombocytopeania and arthritis), alloimmunity cergetal/neonatal alloimmune thrombocytopeania, asthma and allergy), chronic or acute inflammatory diseases (e.g. Crohn's, HDN (erythroblastosis foetalis), Goodpastures, sickle cell anaemia and coronary artery occlusion). The binding molecules do not activate complement or trigger cytotoxic activities through Fogamma and desirable 1gG properties have been retained. The polypeptides do not contain immunogenicity. Further, they still bind Protein A, which is consistent with being able to cross the human placenta through interaction with FCRN (neonatal FC receptor).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò

The present sequence represents a fusion protein, the mature portion of which is claimed, comprising the rat Thy-1 extracellular region (see also ARY31786) and the constant region (hinge, CH2, CH3) of human IgG1. The fusion protein was transiently expressed in COS cells transfected with an expression plasmid containing a chimeric DNA (see ARX8999). A claimed method for inhibiting angiogenesis in a mammal comprises administering a compound that inhibits Thy-1 associated proliferation of an endothelial cell. This compound is preferably the extracellular region of rat or human Thy-1. The method is used in the treatment of a mammal having a tumour (e.g. by reducing vascularisation), atherosclerosis or rheumatoid arthritis, the lesions of which may be associated with neovascularisation (all claimed). Another claimed method for inhibiting angiogenesis involves administering a Thy-1 antisense nucleic acid or a Thy1-specific antibody linked to a cytocoxic agent. A method for promoting angiogenesis involves administering a compound that increases Thy-1 expression in an endothelial cell fragment and the constant region of an immunoglobulin.
                                                                                                                  Inhibiting Thy-1 expression in endothelial cell, useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                              The present sequence represents a fusion protein, the mature region of which is claimed, comprising the human Thyl extracellular region (see AAY31787) and the constant region (hinge, CH2, CH3) of human 1gGl. A claimed method for inhibiting anglogenesis in a mammal comprises administering a compound that inhibits Thyl associated proliferation of an endothelial cell. The compound is preferably the extracellular region of rat or human Thyl. The method is used in the treatment of a mammal having a tumour (e.g. by reducing vascularisation), atthereosclerosis or rheumatoid arthritis, the lesions of which may be associated with neovascularisation (all claimed). Another claimed method for inhibiting anglogenesis involves administering a Thyl.
                                                                                                                                                                                                                               Inhibiting Thy-1 expression in endothelial cell, useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         207

This amino acid sequence represents the heavy chain of humanised anti-CD23 (FCERII) monoclonal antibody Cl1, composed of a human canti-CD23 (FCERII) and the heavy chain complementarity determining regions (see AAY32257-59) of murine antibody Cl1. The DNA was constructed by splice overlap PCR. The invention provides altered antibodies, such as chimeric or humanised antibodies, which comprises sufficient of the amino acid sequences of the Cl1 light and heavy chain complementarity determining regions to render them capable of binding to the CD23 type II molecule expressed on meamatopoidatic cells. The antibodies are used to block soluble CD23 formation in human therapy, for the treatment of arthritis, lupus erythematosus, Hashimoto's thyroiditis, multiple sclerosis, labetes, uveitis, dermatitis, psoriasis, urticaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative colitis, Crohn's disease, Sjogren's syndrome, allergies, allergic asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, colitis, Crohn's disease, COPD, insulitis, bronchitis ecema, graft-versus-host disease, COPD, insulitis, bronchitis (particularly chronic bronchitis) or diabetes (particularly type I diabetes), and B-cell malignancies (claimed). They are also useful for studying interactions between CD23 and various ligands and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cell receptor specific antibodies useful for treating e.g. arthritis.

The sequences given in AAR41707-09 are encoded by the expression vector pAH4625. This vector represents the cloning of the human gamma—2, with the variable region of the murine monoclonal antibody 128.1. This plasmid encodes a chimeric monoclonal antibody 128.1. This plasmid encodes a chimeric monoclonal antibody in which the heavy chain (VH) is derived from a muran source and the sequences encoding CHI, CH2 and CH3 are derived from a human source. This vector, in combination with the chimeric light chain vector, pAG4611 (see also AAQ4845), was transfected into SP2/0 cells and clones were isolated. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to encropharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological disorders eg. brain tumours, and Albs, stroke, epilepsy, Parkinsons and Alzheimers disease. It may

AAB07474-78 represent native IgG Fc regions. The proteins are used to produce Fc region-containing polypeptides that have altered effector function as a consequence of one or more amino acid modifications in the Fc region. The variant polypeptides are useful for treating cancer, allergic conditions such as asthma (with an anti-lgE antibody), and LFA-1-mediated disorders. Where the polypeptide binds the HER2 receptor, the disorder preferably is HER2-expressing cancer, e.g. a benign or malignant tumnour characterized by overexpression of the HER2 receptor. Such cancers include breast cancer, squamous cell cancer, small-cell lung cancer, non-small cell lung cancer, gastrointestinal cancer, pancreatic cancer, glioblastoma, cervical cancer, ovarian cancer, bladder cancer, hepatoma, colon cancer, colorectal cancer, inver cancer, liver cancer, liver cancer, liver cancer, liver cancer, liver cancer, liver cancer, hepatoma, types of head and neck cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New Fc region-containing polypeptides that have altered effector function due to one or more amino acid modifications in the Fc region, useful in the treatment of cancer and allergic conditions such as

This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides cepresented in AAB7630 - AAB76420 and AAB76432 - AAB76509 are examples of the ErbB2 binding ligands of the invention. Sequences used in the invention. Sequences used in the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, disorders of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, atrokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat alzease, Parkinson's disease, epilepsy, multiple sclerosis, Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease
                                                                           Human, erbB2; HER2; cancer; nervous system disease; stroke; ischaemia; metabolic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea; Down's syndrome; nerve deafness; Menlere's disease; diabetic neuropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Non-naturally occurring peptide ligands which compete for binding human erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -

The present invention relates to a fusion protein, comprising a peptide ligand and an immunoglobulin (Ig) constant region multimerization domain (Ib). The hybrid molecules comprising the peptide ligands and their functional derivatives can be used in the same applications as, a peptide ligand can be used example the peptide ligand can bind ErbB2. The peptide ligand may bind to and inhibit the activity associated with a particular
                                                                                                                                                                                                                                                                                                                                              Fusion protein; immunoglobulin; multidimerization domain; ligand.

The present sequence is human immunoglobulin G2 (1gG2) constant region mature protein. IgG2 forms a fusion protein with human erythropoietin (EPO). EPO has improved biological activity and an extended serum half life greater than 20 hours. The present invention relates to modified composition broteins comprising a FC portion of an immonglobulin (Ig) molecule and an EPO molecule (FC-EPO). The FC portion is fused covalently through its C-terminus directly or indirectly to the EPO molecule, and where the FC portion as well as EPO portion may be modified or mutated. The invention also relates to non-fused EPO molecules which have a pattern of cysteines or disulphide bonding which is distinct from human or animal EPO. Pharmaceutical compositions containing EPO are useful in the treatment of EPO deficient diseases such as anaemia, renal failure, HIV infection, blood loss and chronic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                         Novel modified erythropoietin forms such as fusion proteins, comprising FC portion of an immunoglobulin molecule and a target molecule having the biological activity of erythropoietin forms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Fusion protein; vaccine; cytokine; immunoglobulin; autoimmune disease; inféctious disease; inflammatory disease; neoplastic disease; cancer; immunologic disease; immune response; malaria; tuberculosis; hepatitis; AIDS; influenza; interleukin; IL-2; Ig; human.

The invention relates to vaccine compositions comprising a vaccine and a timed-release formulation of a cytokine or cytokine/immunoglobulin fusion timed-release formulation of acytokine releases the cytokine protein or plasmid at one or more temporal points subsequent to vaccine protein or plasmid at one or more temporal points subsequent to vaccine administration. The vaccines can be used for treating an autoimmune disease, an infectious disease, an inflammatory disease, a neoplastic disease, or an immunologic disease in an individual. The vaccines can be used to elicit immune responses against diseases such as AIDS, malaria, tuberculosis, hepatitis C, hepatitis B, cancer or influenza. The methods can provide for enhancement of one or more immunologic parameters such as an antibody response, a cellular proliferative response as well as cytotoxic T-lymphocyte levels. In addition the Ig can increase the circulating half life of the cytokine. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

CD4-gamma 2 chimeric heavy chain homodimer; immunoconjugate; treatment; cytotoxic radionuclide; cell surface glycoprotein; prevent; infection; cellular immune response interaction mediator; HIV interaction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A CD4-gamma 2 chimeric heavy chain homodimer is linked to a non-peptidyl toxin or a gamma radiation-emitting radionuclide of low to moderate cytotoxicity. The resulting immunoconjugate comprising the toxin can be used to kill HIV infected cells and to treat HIV infected subjects to reduce the population of HIV infected cells. It can also be used to reduce the likelihood of infection. The immunoconjugate comprising the radionuclide can be used to image HIV infected tissue, to calculate the stage of HIV infection or the efficacy of an anti-HIV treatment using the imaging technique and for determining the prognosis of an HIV infected subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human CD4-gamma 2 chimeric heavy chain homodimer amino acid sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a CD4-gamma2 chimeric heavy chain homodimer. It was produced by expression of the coding mutagenised CDNA (produced as described in AAQ28088) in Dhfr-CHO cells. The protein is efficiently assembled intracellularly and effectively secreted from mammalian cells pref. CHO, COS, or myeloma cells as a homodimer, enabling high recovery and purification from the medium of cells expressing it. It possesses increased serum half-life and has increased avidity for HIV of. heavy chain dimers. It can inhibit HIV infection of CD4+ cells and block the spread of HIV infection within a patient. Attachment to a detectable marker makes it useful in an assay for HIV or SIV infection, and it can also be linked to toxins, eg biphtheria, pseudomonas exotoxin A (domainS I or II) or the deglycosylated A-chain

This sequence represents the human CD4-gamma 2 chimeric heavy chain chandimer amino acid sequence. The invention relates to an chandimer amino acid sequence. The invention relates to an invention by the composition of the control than an expectation of two heavy chains and two light chains. The cytotoxic radionuclide is linked to either the heavy chains or the light chains, or to all four chains, directly or through a bifunctional chelator. Both heavy chains of chains, directly or through a bifunctional chelator. Both heavy chains of chains, directly or through a bifunctional chelator. Both heavy chains of chains are chimeric CD4-180 (amunoglobulin) G2 chains encoded by vector CD4-180 (and poth light chains are chimeric CD4-180 (and poth light chains are chimeric CD4-180 can both light chains are chimeric CD4-180 can light calls of the monocyte/macrophage lineage of non-polymorphic cells us face of lyopprotein that is expressed on the surface of helper T lymphocytes, cells of the monocyte/macrophage lineage and dendritic cells. CD4 associates with major histocompatibility complex (MHC) class II molecules on the surface of antigen presenting cells to mediate efficient cellular immuno response interactions. In humans CD4 is the target of interaction with the human immunodeficiency virus HTV. The manoconjugate is used to kill cells infected with HTV, and for treatments). The immunoconjugate is also used for imaging HTV-infected tissues (for staging and prognosis of HTV infected patients. The immunoconjugate should be active against all strains of HTV (since the immunoconjugate should be active against all strains of HTV (since the immunoconjugate should be active against all strains of HTV (since the immunoconjugate should be active against all strains of CD4-9p120 interaction is essential for infection). The heterotetraners collinears and purification from the culture medium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New immunoconjugate, used to treat, prevent or image human immune deficiency virus infection, comprises radionuclide attached to heterotetramer of CD4-immunoglobulin chimeras
    staging; prognosis; envelope glycoprotein burden; human.

The present invention relates to a method for inhibiting infection of a cold+ cell by HIV. The method comprises contacting the HIV with a CD4-IgG2 chimeric heterotersmer to form a complex with the HIV (CD4 = cluster of differentiation 4: IgG2 = immunoglobulin gamma 2). CD4 is a cell surface glycoprotein that is expressed primarily on the surface of reals. In and, CD4 is the target of interaction with HIV. The heterotetramer has two heavy and two light chains which are encoded by expression vectors tas used to inhibit infection of a CD4+Ccll by a HIV and to prevent CD4+cells of a subject from becoming infected with HIV. The method is also useful for treating a subject having CD4+cells infected with HIV. The present sequence is human fusion protein: CD4-gamma2 chimeric heavy chain homodimer. This sequence was used in the method of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inhibiting human immunodeficiency virus (HIV) infection of a CD4+ cell, or treating a subject having CD4+ cells infected with HIV involves using CD4-IgG2 chimeric heterotetramer to form a complex with the HIV -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0; Gaps

```
Immunoconjugate for treating human immunodeficiency virus-infected subject, consists of cytotoxic radionuclide linked to heterotetramer comprising two chimeric CD4-IgG2 heavy chains and two chimeric CD4-kappaalight chains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to an immunoconjugate, comprising a cytotoxic radionuclide linked, directly or via a bifunctional chelator, to a heterotetramer having two chimeric CD4-1gG2 heavy chains encoded by an expression vector CD4-1gG2HC-PRCCWV and two chimeric CD4-kappa light chains encoded by an expression vector CCG4-LC-PRCKW. The invention is useful for killing human immunodeficiency virus (HIV)-infected cells, for the treatment and prevention of infection with HIV.
            CD4-gamma2 chimeric heavy chain homodimer protien.

-!- ALTERNATIVE PRODUCTS: CELL LINES PRODUCING IGG CONTAIN TWO MRNA SPECIES FOR IG GAMMA CHAINS. THE MAJOR SPECIES ENCODES SECRETED GAMMA CHAINS. A LESS ABUNDANT SPECIES APPEARS TO ENCODE MEMBRANE-BOUND CHAINS IN THAT IT CONTAINS AN ALTERNATIVE 3' END, ENCODED IN SEPARATE EXONS, THAT IS HOWOLOGOUS WITH THE MEMBRANE-BOUND SEGMENT OF MU CHAINS.

A: Reference number: A92219; MUID: 77118561
A: Contents: normal gamma-3 chains, sequence corresponding to residues 12-97 of protei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A; Note: a carboxyl-terminal Lys is removed posttranslationally A; Note: this sequence may represent an allelic form or another gamma chain subclass C; Comment: The heavy chain disease protein Wis is shown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Accession: A92219
A; Molecule type: protein
A; Residues: 12-97 < MIC>
A; Note: the hinge region in gamma-3 chains is about four times as long as in other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A Map position: 14932.33-14932.33

Ig gamma 4 chain constant region - pig (fragment)
C.Species: Sus scrofa domestica (domestic pig)
C.Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 21-Jan-2000
C.Accession: I47162
J. Immunol: 153, 3565-3573, 1994
A.Title: Five putative subclasses of swine IgG identified from the cDNA sequences of A.Reference number: I47158; MUID:95015845
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gamma 3 chain constant region - pig (fragment)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 4, A Sequence 50, Sequence 50, A Sequence 50,
